

MARK-3®

SERIES

B-6288 MECHANICAL CUTOUT SWITCH

Overview:

This Tech-Note outlines the latest improvements done on the MARK-3 B-6288 Mechanical Cutout Switch (600115).

Improvements and Adjustment:

WATERAX has improved the quality of two components on the B-6288 Mechanical Cutout Switch. The link and spring have been modified.

Each cutout switch is now factory calibrated at a slightly higher weight (85 g +/- 10 g) to improve the precision and repeatability of the mechanism.

For users that used to pre-adjust new mechanical cutout switches before installing on the MARK-3, please note that this adjustment is no longer necessary; the cutout switch is ready for use out of the box.
